

Subprocessor List

Organization: Rough Cut Manufacturing — operator of WorkTrackPro

Policy Owner: Jacob Rough, CEO — jacobrrough@gmail.com

Last updated: June 17, 2026

Rough Cut Manufacturing uses the third-party service providers ("subprocessors") below to operate the WorkTrackPro application. Each processes data only as needed to provide its service and under its own security and compliance commitments. We review this list during our annual risk review and when adding a provider.

Subprocessor	Purpose	Data processed	Region	Compliance
Supabase (incl. AWS)	Primary database, authentication, file storage	All application data: accounts, job/ manufacturing, customer/vendor, accounting, and bank-feed data	United States (AWS us-west-2)	SOC 2 Type II
Netlify	Application hosting and serverless functions (API/ integration endpoints)	Application traffic, request data, and operational logs	United States	SOC 2 Type II
Plaid Inc.	Bank / credit-card account connectivity and transaction sync	Financial-account data: account name/ mask, balances, and transactions; provider access tokens	United States	SOC 2 Type II, ISO 27001
Intuit / QuickBooks Online	Accounting-platform synchronization	Accounting records synced to/from QuickBooks; provider access tokens	United States	SOC 2
Cloudflare (Turnstile)	Bot/abuse protection on public forms	Limited technical data (e.g., IP, challenge token) on public form submissions	Global	SOC 2 Type II
GitHub	Source-code hosting and dependency vulnerability scanning	Application source code only — no customer or financial data	United States	SOC 2 Type II

Notes

- Access tokens for financial integrations (Plaid, QuickBooks) are stored encrypted and are accessible only to server-side functions; they are never exposed to client browsers.
- We do not sell personal information, and we do not share data with subprocessors for their own

marketing.

- Questions about subprocessors: jacobrrough@gmail.com.
